Experience

AWS Cloud and Networking Trainee

June 2024 – June 2025

Technical Hub pvt. ltd

Key Contributions:

- Gained strong proficiency in **AWS services and networking fundamentals** and applied them in hands-on cloud projects.
- Designed and deployed solutions using **EC2, S3, VPC, IAM, and RDS**, ensuring secure and scalable architecture.
- Configured **routing, switching, subnets, VLANs, and firewall rules**, developing strong CCNA-level networking expertise.
- Implemented key networking concepts including **routing, switching, subnets, VLANs, and access control** aligned with CCNA standards.

AIML Intern

May 2025 – July 2025

Andhra Pradesh State Council of Higher Education (Apsche)

Key Contributions & Impact:

- Designed a Butterfly species classification system with the help of CNN transfer-learning classifier (VGG16/ResNet50) trained on 12,000 annotated butterfly images, achieving **~92% validation accuracy**.
- Improved model generalization using **robust preprocessing and augmentation pipelines** for diverse species imagery.
- Built an end-to-end with **Python Flask** by enabling real-time butterfly species identification from user-uploaded images.
- Documented dataset workflow, evaluation metrics, and model behavior to support for the **research** and academic reporting.

Projects

Autonomous AI Agent for Intelligent Task using LangGraph

Research Implementation

🌐 GitHub Research Paper

Agentic AI Developer

- Built an autonomous multi-step AI agent using **LangGraph**, enabling structured planning, reasoning, and automated task execution.
- Integrated **GPT-4 and LLaMA** to power goal understanding, decision chains, and executable actions for data analysis and code generation workflows.

ATS Resume Checker Using Large Language Models

- Developed an **ATS-friendly resume analysis system** using Streamlit and OpenAI/Gemini to evaluate resumes against job descriptions.
- Implemented keyword extraction, format validation, and a **match-score engine**, providing actionable improvement suggestions for job seekers.

Health Care Prediction Using Machine Learning

- Built a heart-disease prediction system using **Logistic Regression** with preprocessing, scaling, and feature engineering for reliable clinical inference.
- Designed an interactive **Streamlit Interface** for real-time patient risk prediction and deployed the solution on **AWS** for scalable access.

Technical Skills

Languages: Python, Cpp, Java, JavaScript

AI/ML: LLMs, RAG, Fine-tuning, NLP, Deep Learning, Transformers

Frameworks: LangGraph, PyTorch, TensorFlow, Spring Boot, FastAPI

Cloud & DevOps: Aws Services, Azure OpenAI, Kubernetes, Docker, CI/CD

Databases: PostgreSQL, MongoDB, VectorDB

System Design: Microservices, Event-Driven Architecture, Distributed Systems

Math Foundations: Linear Algebra, Probability, Statistics, Optimization

Education

Aditya College of Engineering and Technology

Sep 2022 - May 2026

Btech, Artificial Intelligence And Machine Learning

CGPA – 8.07

Narayana Junior College , Kakinada

Jun 2020 – May 2022

Board of Intermediate Education

Percentage : 89

Coding & Certifications

- Solved **250+ problems** on **LeetCode**, **HackerRank**, and **GFG** with active competitive programming participation
- **AWS Certified Cloud Practitioner**
- **Google Cloud Engineering Certificate**
- **CCNA - Introduction to Networking**
- **Python , Java , Sql Certified in Hackerrank**
